- **Individual protection measures, such as personal protective equipment**
- **General protective and hygienic measures**  
Wash hands during breaks and at the end of the work.  
Do not eat or drink while working.  
Take off all contaminated clothing immediately.
- **Breathing equipment:**  
Not necessary if room is well-ventilated.  
Use breathing protection in case of insufficient ventilation.  
Breathing apparatus suitable for this purpose should be worn when solvent concentration exceeds the maximum workplace concentration values.
- **Hand protection**  
The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.  
Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.  
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
- **Material of gloves**  
Nitrile rubber, NBR  
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
- **Penetration time of glove material**  
In case of a layer thickness of 0.2 mm the penetration time is longer than 480 minutes.  
The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
- **Eye/face protection** Safety glasses recommended during refilling.
